

SKEG MEASUREMENT GUIDE

If the desired motor is not listed on our website, please email info@keelguard.com with the information listed below so we can determine the best model fitment.

1. Year, make, horsepower rating, and model of motor
2. Side profile pictures of skeg
3. Length along top of skeg

Note: It is important that the pictures be taken from a straight/level view. If the picture is taken at an angle from above, below, or to either side, it can affect the proper matching of either SkegPro® or SkegGuard® due to the perceived changes in the angles.

Please refer to the examples below for best results:
